The economic impact of non-melanoma skin cancer on the society and the welfare system (Raphaelite).

NMSC as an occupational disease

- Although 1 to 25 in Europe workers are at a significantly increased risk of development of non-melanoma skin cancer (NMSC).
- Direct yearly costs of malignant melanoma (MM) in the US exceed $2 billion.

The financial burden

- The economic burden of skin cancer is estimated at €1.5 million per year in the US.
- The indirect cost of solar-induced cancer is valued at €300 million per year.

Policy and Legislation

- Recognizing NMSC as an occupational disease.
- Natural policy programming: Preventive measures for occupational exposure to ultraviolet radiation (UVR).
- Principle 10 sets the European Pillar of Social Rights.

European pillar of social rights

- Formal employment in Europe is at 43%, reaching 32% in the construction sector.
- Unregistered employment may lead to work-induced diseases and disabilities.
- Five years of outdoor work can increase the global risk of developing NMSC three times.
